

CSCY 2000 Final Project

Introduction

You are working in a group of three developers and you have been tasked to create a website for a non-profit organization. Since we do not have real partnerships with an NPO, you and your team will either choose one already in existence or come up with a fake one that would fall under the umbrella category of a non-profit organization.

First you will create a site map that details **at least 6 pages** that will be used for this website. In each of the pages, you will wireframe the page and give context to the elements that you have decided should go on each page.

There are elements that should be included in the sitemap indicated below:

1. One page should have a form with two fieldsets and a total of 10 input fields and a submit button
2. One page should have a table of some form
3. One page should have a media element
4. One page should incorporate Javascript for interactivity as a hamburger menu
5. One page should incorporate Javascript for interactivity for hiding/showing content
6. One page should utilize a grid layout

You will then host the website on Github Pages using one of your group member's Github account.

Requirements

You will be required to submit the following:

1. All your HTML files for the site
2. All your CSS files for the site
3. All your images and media for the site (if offline media)
4. All your Javascript files for the site
5. A 5-8 minute recorded presentation about your project
6. A group evaluation (sent to me privately via email)

Site Requirements

Your site should incorporate the following design requirements:

1. A different layout/view for the following media types:
 1. Mobile devices
 2. Tablet devices
 3. Desktop devices
 4. Large Desktop devices
 5. Print
2. A mobile and tablet specific navigation that utilizes the hamburger menu design

3. A favicon for all pages
4. Social Media links in the footer of all pages
5. HTML5 Semantic elements
6. At least one image per page, not including any banner/hero images or any images used in the header

CSS

Your site should incorporate the following style requirements:

1. A primary color, secondary color, accent color, and call to action color
2. Proper use of active whitespace and passive whitespace
3. Hierarchical content structure (headers, paragraphs, etc)
4. Responsive design units
 1. Use of em for units as much as possible
5. Non-default font families with at least 2 fall-backs
 1. Use Google Fonts to find three fonts to utilize
6. Hover selectors for nav elements

Javascript

Your site should incorporate the following Javascript elements:

1. A function for the hamburger menu animations
2. A function to hide/show an element or elements

Presentation

Your presentation should meet the following requirements:

1. Be between 5-8 minutes
2. Include a brief overview of your site map
3. Include a brief overview of your design choices
4. Include a demonstration of the site in different viewport sizes
5. Include an explanation of what content you added
6. A short walkthrough of the site

Github Pages

You will host the whole site on Github Pages. Using Github Pages you can host as many project sites as you want. Please follow the instructions here to create your Github Pages project:

<https://pages.github.com/>

A Note:

These requirements are the bare minimum. You should invest time and effort into the design of your site and make conscious choices about things like margins, padding, border elements, display styles, colors, fonts, and media. This is a showcase of your skills as designers and your grade will reflect that.

The requirements are left vague on purpose. This is a free-form design problem that requires you to understand some of the fundamental ideas of web development while adding in your own personal design choices. As such I will not be giving you step-by-step instructions on how to do something because each of your groups may implement it differently depending on your design needs.

Resources:

Here are some great resources to help you flesh out your designs:

Free Stock Images and Video: <https://www.istockphoto.com/> Color Palette Picker: <https://coolors.co/>

Grading Breakdown:

The following weights will be used to determine your final grade:

Item	Weight
HTML Files	30%
CSS File	30%
Javascript	15%
Presentation	25%

Group Member Expectations:

I expect everyone in the group to participate equally in the project. I also expect everyone in the group to have as much to do as everyone else in the project. If you feel that a group member is not doing their fair share of the work, please email me and we can have a group meeting about it to discuss the distribution of work responsibilities.

Deliverables:

You will be required to submit the following on Canvas:

1. A zip file containing all the required files for the site
 1. HTML files
 2. CSS Files
 3. Image/Media Files
 4. Javascript Files
2. A link to your group's presentation recording

3. A link to your hosted website on Github Pages

All submissions must be made no later than **11:59PM Thursday April 23, 2026**. I will not accept late submissions at all.
